ABOUT ME

[Dewi Tri Lestari]

I am a Geophysics graduate from Universitas Gadjah Mada (GPA: 3.75) with a profound interest and hands-on experience in data analytics, machine learning, and business operations management. I have a proven track record of processing over 600,000 rows of data using Python, SQL, MetaBase, and Power BI, combined with solid leadership skills gained from leading various field teams and organizational divisions. I am highly dedicated to leveraging data-driven approaches to solve complex problems and drive strategic decision-making.

Built interactive retail dashboards (Power BI & Metabase) to track sales performance, retention trends, and RFM customer segmentation from 600,000+ raw transaction data. Additionally, I developed a Machine Learning-based Product Recommendation web app using Python (Collaborative Filtering) to automate cross-selling strategies.

Tools: Python, SQL, Power BI, Metabase

Portfolio 2 Sentiment Analysis

Built an interactive Streamlit web application to analyze public sentiment regarding the Indonesian Rupiah's depreciation using social media data. I developed a custom Natural Language Processing (NLP) pipeline tailored for informal Indonesian text, which includes slang normalization, Sastrawi stemming, and custom stopwords filtering. The classification model was trained using Logistic Regression to deliver real-time sentiment predictions (Positive/Neutral/Negative) alongside its confidence scores.

Tools: Python, Streamlit, NLP (Sastrawi), Logistic Regression

Global Health Metrics Dashboard

Designed an interactive dashboard using SAP Analytics Cloud to visualize and track global health metrics, including the distribution of new cases, testing volumes, and positivity rates across various countries. Beyond descriptive analytics, I utilized SAP Cloud's built-in predictive forecasting tools on time-series data to project future trends in new cases, empowering proactive and data-driven decision-making.

Tools: SAP Analytics Cloud (SAC), Predictive Analytics
